

## Values-Based **Futures:** Trends, Signals, and Values to Build the Library of the Future

Miguel Figueroa
American Library Association
Center for the Future of Libraries

Foresight is fundamentally about the study of change.

We can learn a great deal about the future by looking at what is happening now.

"Foresight is thinking ahead to how trends, issues, and developments that can be observed in the present are likely to shape alternative futures

- What are the key forces that are shaping the future?
- What might be their possible outcomes?
- What implications could they have for the learning and actions that must happen in the present?"

Marsha Lynne Rhea. *Anticipate the World You Want: Learning for Alternative Futures*. Scarecrow Education: Lanham, Maryland. 2005. p. 21

"Being fanatically focused on the changing consumer behaviors across all sectors, not just [libraries] – whether because of digital tools or globalization or other generational factors...

The future of [libraries] will be defined by leaders who understand the larger context in which [libraries] operate, not by navel gazing."

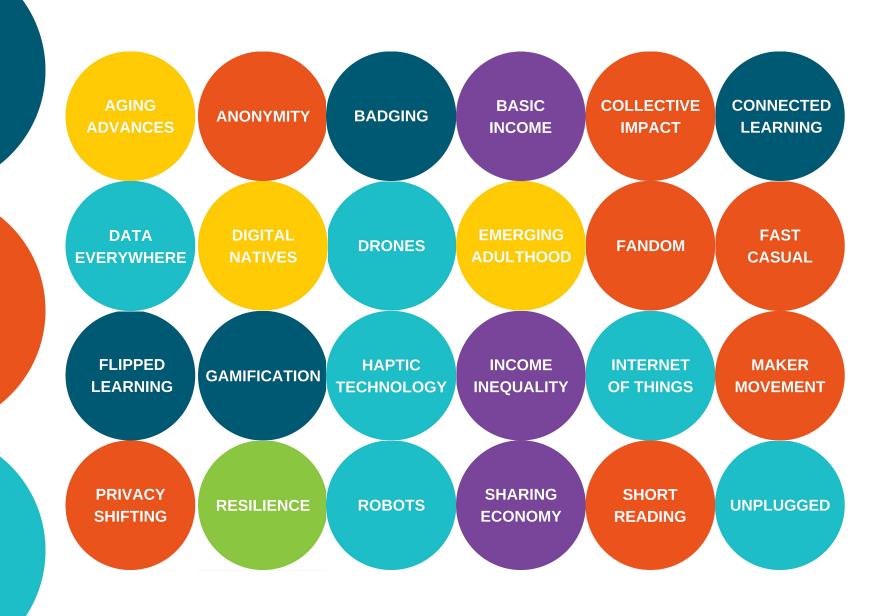

"The best cities start with values about what is important to them in the longer term. On this basis they establish principles they are truly committed to, that guide their actions....They must not be too obvious. Statements no one would disagree with gain little traction....The wish needs a compelling narrative attached to it\_"

Charles Landry. *Cities of Ambition*. Comedia: Near Stroud, United Kingdom. 2015.
